## Diagnostic Starting Point - Rear Wheel Steering

Begin the system diagnosis with the Diagnostic System Check. Refer to [Diagnostic System Check - Rear Wheel Steering](#) . The Diagnostic System Check will provide the following information:

- The identification of the control module that commands the system.
- The ability of the control module to communicate through the serial data circuit.
- The identification of any stored diagnostic trouble codes (DTCs) and their status.

The use of the Diagnostic System Check will identify the correct procedure for diagnosing the system and where the procedure is located.
